Chemistry - Internal Assessment 1

Ans 1)

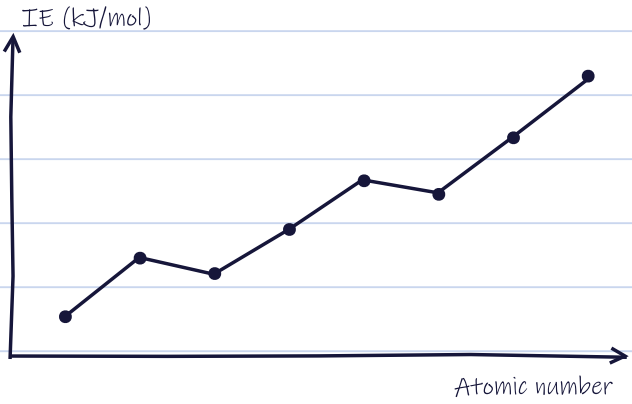

Electronic configuration is 2, 8, 1.

Ans 2)

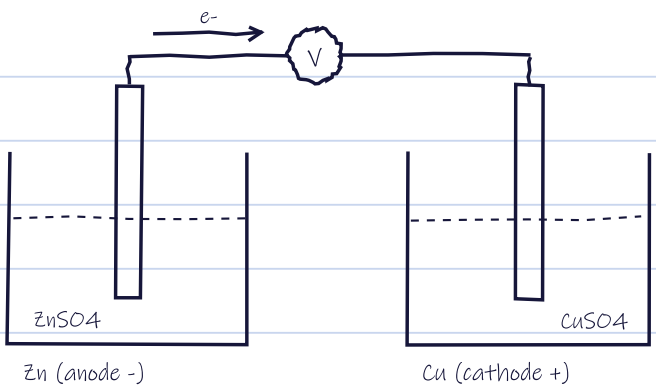

Water is H-O-H. The bond angle is 104.5°.

Ans 3)

Ionisation energy increases across the period because the atoms get smaller.

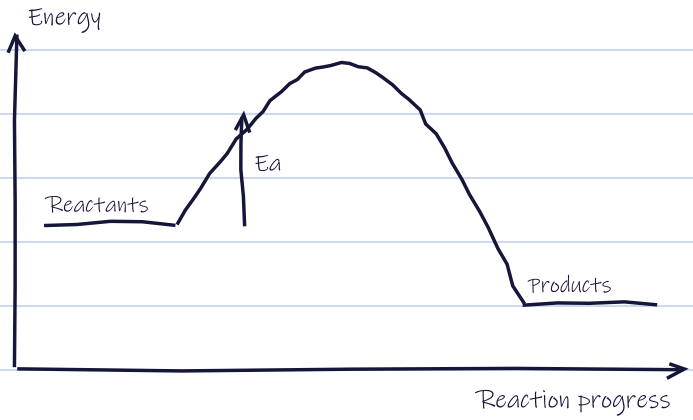

Ans 4)

$Zn \rightarrow Zn^{2+} + 2e^-$

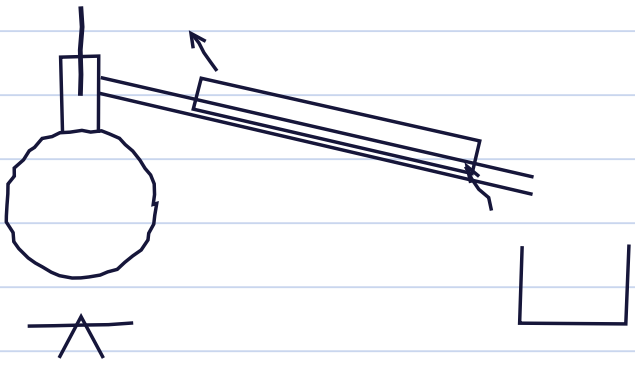

$Cu^{2+} + 2e^- \rightarrow Cu$

Ans 5)

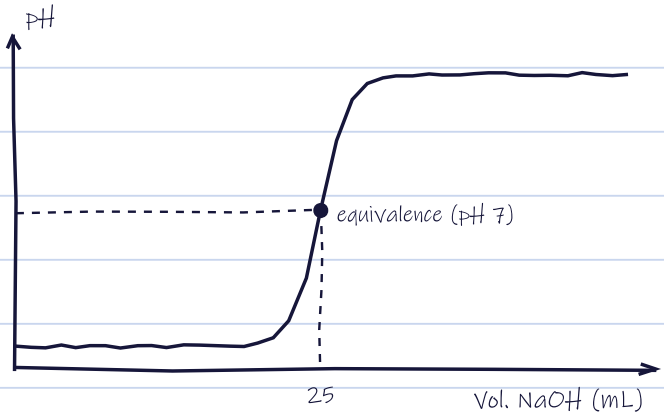

A catalyst makes the reaction faster.

Ans 6)

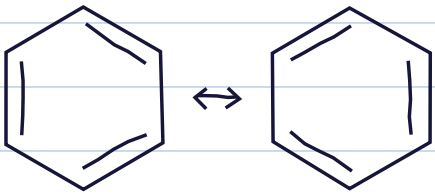

The condenser turns the vapour into a liquid. Water goes in at the bottom.

Ans 7)

V = 25 mL since the concentrations are the same. Equivalence point is at pH 7.

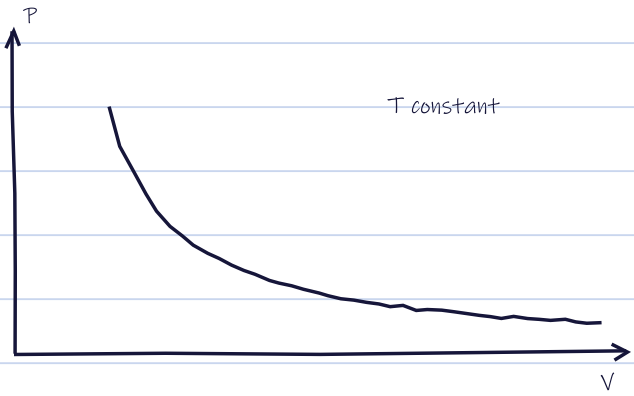

Ans 8)

Kekule structures

Ans 9)

PV = constant at constant temperature.

2 x 3 = 6 x V2, V2 = 1 L
