Name: Sneha Kulkarni Roll No: 1CH24CS041 Sec: A

Chemistry - Internal Assessment 1

Ans 1)

Sodium has 11 electrons.

Sodium (Na)

Configuration 2, 9. Valency 9.

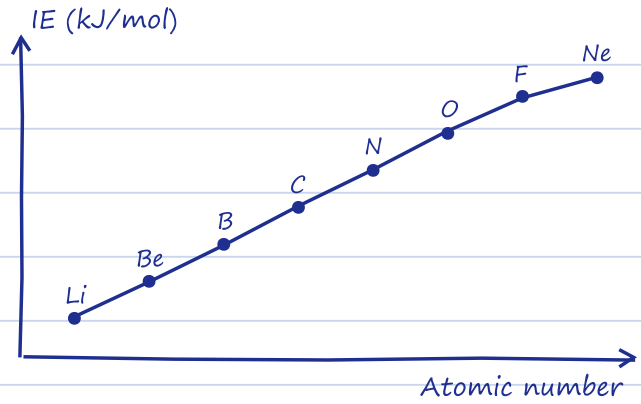

Ans 2)

180°

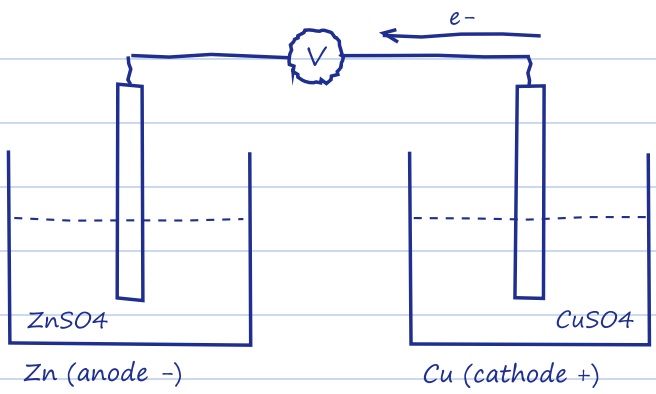

Water is a linear molecule with angle 180° because the hydrogens repel each other.

Ans 3)

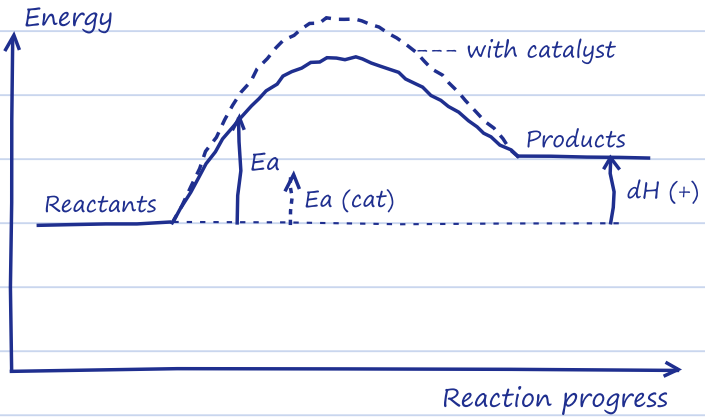

Ionisation energy decreases across the period because more electrons are added so they are easier to remove.

Ans 4)

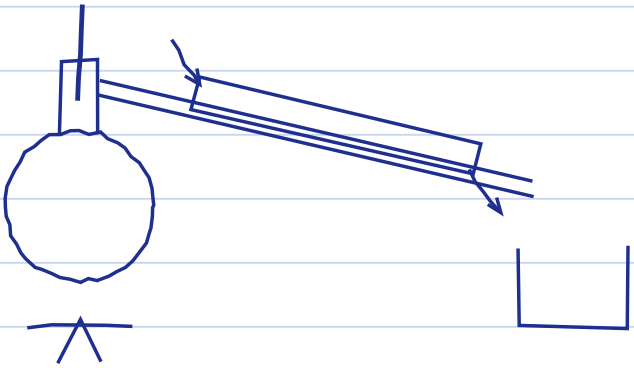

Electrons flow from copper to zinc. Cu -> Cu2+. EMF = 0.34 - 0.76 = -0.42 V

Ans 5)

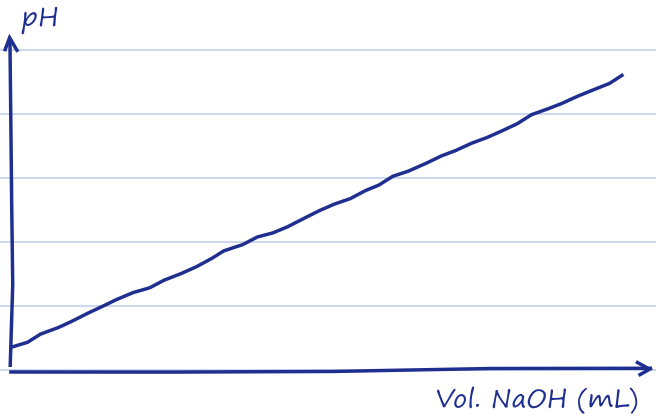

A catalyst increases the activation energy so the reaction is controlled and goes faster.

Ans 6)

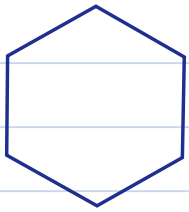

The condenser heats the vapour so it evaporates faster. Water enters at the top.

Ans 7)

pH increases in a straight line as NaOH is added. Volume = 12.5 mL.

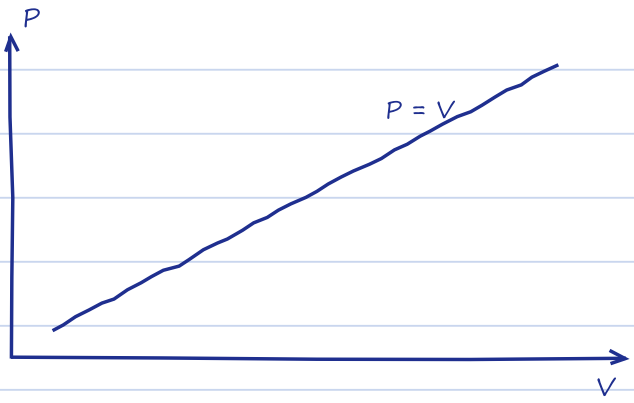

Ans 8)

C_6H_{12}

Benzene has only single bonds so it does addition reactions.

Ans 9)

Pressure is directly proportional to volume. V2 = 3 x 6 = 18 L
